Application/Control Number: 09/851920

Art Unit: 1754

Applicant's election without traverse of claims 1-11 in Paper No. 5 is acknowledged.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5,6,8,9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "high excess sulfuric acid" in claim 5 is a relative term which renders the claim indefinite. The term "high excess sulfuric acid" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

The term "high ferric iron level" in claim 6 is a relative term which renders the claim indefinite. The term "high ferric iron level" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

In claim 5, "relatively high excess sulfuric acid level" is indefinite as to what it is relative to.

In claim 6, "relatively high ferric iron level" is indefinite as to what it is relative to.

Application/Control Number: 09/851920

Art Unit: 1754

In claim 8, "determining an approximation of the amount of soluble molybdenum" is indefinite as to what the soluble molybdenum is determined in; ie. the soluble molybdenum in what is determined? Is it the concentrate or the leach slurry or something else?

In claim 8, it is indefinite as to what is considered to be an "approximation".

In claim 9, "the determining step" lack(s) proper antecedent basis in the claim(s).

In claim 9, "monitoring concentrate analysis, recycle solution analysis" is indefinite as to what the positive process steps of each of the "analysis" are. It is also indefinite as to what the metes and bounds of the "accomplished by" language is.

In claim 9, "recycle solution" lack(s) proper antecedent basis in the claim(s). There is no solution being recycled in the process.

In claim 9, "pulp density" is indefinite as to what this refers to; ie. pulp density of what?

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sweetser '151 or Barry '888.

Application/Control Number: 09/851920

Art Unit: 1754

Sweetser and Barry each teach or at least suggest the instantly claimed process but may differ in that regulating the ferric and sulfuric acid concentration may not be stated.

Each of the taught processes oxidizes an aqueous slurry of molybdenite at the instantly claimed temperature and oxygen pressure so that the instantly claimed "regulating" recitation would appear to be inherently included in the taught process. This is because each of the taught processes forms sulfuric acid and molybdenite contains iron which would form ferric ion during the oxidizing process. Therefore the taught processes would self regulate the ferric iron and the sulfuric acid content during the oxidation reaction.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, In re Malagari, 182 USPQ 549.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Bos whose telephone number is (703) 308-2537. The examiner is on the increased flexitime program schedule and can normally be reached between 8AM and 6PM Monday through Friday. The FAX No. for After Final amendments is 703-872-9311; for all
